

Underground Fuel Tank Replacement at Muni Kirkland Yard

Nine-month Construction Scheduled to Begin in March 2017

INTRODUCTION

To modernize the Muni system, the San Francisco Municipal Transportation Agency (SFMTA), which manages Muni, will replace two underground fuel tanks in the Kirkland Yard with new fuel storage tanks. The project, anticipated to start in late March or early April, will last for approximately nine months. It will bring the tanks up to code, improve safety and make fueling faster and more efficient.

The work, located at northeast side of Kirkland Yard next to Beach and Stockton streets, will involve excavation and removal of the old tanks, and installation of two new tanks. The new fueling system will store renewable diesel with added features. The SFMTA will work with the contractor to minimize the inconveniences for Muni customers, local merchants and nearby residents, however there will be temporary service adjustments and short-term construction impacts including:

- Partial bus substitution for the E and F lines
- Relocation of the F stop at Beach and Stockton
- Street parking removal
- Traffic lane closures
- Sidewalk closures
- Noise and dust during daytime work
- Possible odors from excavation of contaminated soil

The work will take place Monday through Friday during daytime hours.

The SFMTA will continuously update the community on traffic and service adjustments with fliers, signage, social media postings and ambassador support as construction proceeds.

Also as part of the contract, the Flynn and Scott yards will each have two underground waste tanks replaced with above ground waste tanks. Work at Flynn and Kirkland yards will take place simultaneously and Scott will follow afterwards.

Thank you for your understanding and patience while we work to improve your Muni system.

For concerns or assistance, please contact: Tess Kavanagh, Project Manager, at 415.701.4212, via email at tess.kavanagh@sfmta.com or Jay Lu, Public Relations Officer, at 415.701.4387, via email at jay.lu@sfmta.com.

HIGHLIGHTS

The new tanks will be equipped with new features that will make fueling faster and more efficient:

- Double-wall tanks
- A new monitoring system to detect leaks
- Faster and more reliable dispensers
